Jaden J. Lee

| Irvine, CA 92618 | (949) 751-7006 | jadenlee0810@gmail.com | LinkedIn | GitHub |

EDUCATION

University of California, Berkeley | College of Computing, Data Science and Society — **Berkeley, CA**
B.A. Statistics (Computer Science Concentration) | *B.A. Applied Mathematics (Economics Concentration)* — *May 2028*

WORK EXPERIENCE

Legali AI (StartX F26, SkyDeck Pad-13) | Website Link — **San Francisco, CA**
Data Engineering Intern — *May 2026 - Present*

- Built and shipped an Attorney Verification Service and Lawyer Marketplace (Node/Express, Postgres) with state-bar license checks, email identity verification, MFA enforcement, and rate-limited anti-fraud guards gating listing activation.
- Engineered LLM-powered document processors with LangChain, pgvector semantic retrieval, and AWS Bedrock to automate contract review workflows.
- Built a real-time WebSocket Messaging Service with AES-256-GCM encryption, consent-token attachments.

Lyrn AI (NVIDIA Inception) | Website Link — **Berkeley, CA**
Founder — *April 2026 - Present*

- Created a AI-native platform that democratizes music education by launching an accessible virtual learning environment using audio artificial intelligence agent research to replace legacy dynamic time-warp methods.
- Orchestrated comprehensive market strategies and crafted high-signal venture collateral to pipeline the startup to access capital and build a team of 5+ employees through early talent recruitment.
- Drove early product adoption by interviewing 10+ music professionals, securing an upcoming pilot program with 50+ students and validating a 28% reduction in teacher workflow time.

NASA - STEM Enhancement in Earth Science — **Remote**
Research Intern — *May 2024 - August 2024*

- Analyzed solar energy generation of 60+ months and 50+ dimensions of data from Electric Reliability Council of Texas to analyze solar and non-solar energy generation during major solar events.
- Completed set of courses including class about global climate and space through a course guided by NASA Center for Space Research at University of Texas, Austin (NASA CSR).
- Presented at the NASA SEES Science Symposium 2024.

PROJECT / RESEARCH

SafePics | Website Link — ***April 2026 - May 2026***

- Built a privacy-first local image editing, local AI background removal, and post-quantum encryption service software with 1000+ unique visitors and 35,000+ total requests within a 30-day span in 40+ countries.
- Used ONNX-powered edge AI for on-device background removal service with no cloud uploads or external API calls.
- Implemented ML-KEM-768 / CRYSTALS-Kyber encryption using Web Crypto API where users can select a lossy/lossless export system with custom export size and format.

Vigil AI — ***December 2025 - April 2026***

- Architected an operating system for nurses that performs real-time analysis for patient monitoring, prediction and patient workflow with security cameras and tools that monitors vitals such as apple watches and continuous glucose monitors.
- Worked on cybersecurity and patient privacy by designing and building an edge-AI infrastructure that only offloads crucial data (with systems that allows patients to define what “crucial data” means based on an onboarding quiz)
- Presented for UC Berkeley SkyDeck Accelerator under the ENGIN 198: Introduction to Startups DeCal course.

BeWear — ***October 2025***

- Built an AI-powered ethical fashion platform that identifies clothing brands from images and generates explainable sustainability scores across labor, sourcing, environmental impact, and transparency.
- Helped engineer an Elasticsearch database of 6,000+ brand data with fuzzy matching and typo tolerance; integrated Google Lens via SerpAPI and Claude for visual brand identification and extraction.
- Developed a LangGraph-based greenwashing investigation agent with Tavily web search and real-time SSE streaming.

AWARDS / CERTIFICATES

American Invitational Math Examinations Qualifier (AMC 12 Passing score x2)
USA Computing Olympiad Silver Division
Introduction to Programming with MATLAB

SKILLS

Programming Languages: *Python, TypeScript, CUDA, SQL, MATLAB, Java*
ML Infrastructure & AI: *PyTorch, ONNX Runtime, LangChain, AWS Bedrock, NumPy*
Backend, Web & Databases: *PostgreSQL, pgvector, Node.js, Express, SQLite, React, Tailwind CSS, Git*
